CHAPTER 01

Welcome & The Sovereign Privacy Promise

Digital Bestie is designed with a fundamental architectural principle: **your thoughts, financials, passwords, and emotional reflections belong solely to you**.

Unlike cloud-hosted AI assistants (ChatGPT, Claude, Gemini) where your prompts and files are transmitted to corporate data centers and stored on remote servers, Digital Bestie runs entirely on your Mac's Apple Silicon Unified Memory using Ollama. No remote servers ever read your chats, living dossier, or memory logs.

> **The 100% Local-First Promise:** All user data lives inside `~/.digital-bestie/` on your computer. When encrypted via the macOS Keychain (Electron `safeStorage`), the files are inaccessible to unauthorized processes.

💬 Candid Confidante

Uncensored real talk, boundary defense, and strategic clarity without robotic cheerleading.

🧠 Persistent Dossier

Remembers your 90-day targets, weekly burn rate, hard cash floor, and avoidance habits.

⚡ Bicameral Speed

Dual-engine routing balances ultra-fast conversational models with heavyweight reasoning engines.

CHAPTER 02

💻 Installation & Hardware Initialization

Digital Bestie is distributed as a signed macOS Universal DMG for Apple Silicon Macs (M1, M2, M3, M4).

Step 1: Install Application

Download `Digital Bestie-darwin-arm64-2.5.0.dmg` from GitHub Releases. Drag **Digital Bestie.app** into your **/Applications** folder.

> **macOS Gatekeeper Verification:** If macOS displays an unidentified developer warning on first launch, open Terminal and execute:
>
> ```
> xattr -cr "/Applications/Digital Bestie.app"
> ```

Step 2: Recommended Starter Models

Make sure Ollama is installed and running on your machine. Open Terminal and pull the recommended weights according to your Mac's Unified Memory:

🚀 Mac Studio Tier (64GB+ RAM)

```
ollama pull hermes3:70b
ollama pull qwen2.5-coder:32b
ollama pull nomic-embed-text
```

Highest reasoning fidelity for executive strategy and full-stack software development.

⚡ MacBook Pro / Air (16GB–36GB RAM)

```
ollama pull qwen2.5:14b
ollama pull llama3.1:8b
ollama pull nomic-embed-text
```

Instant token throughput, ultra-low memory footprint, balanced performance.

CHAPTER 03

💬 Daily Conversational Workflow

The main Chat Studio is your operational command deck. It supports streaming responses, custom personas, folder organization, and instant copy/export.

Key Chat Capabilities

- **Persona Switcher (`⌘P`):** Toggle between *Digital Bestie* (candid, warm, strategic), *Executive Strategist* (ruthless capital allocation), *Full-Stack Architect* (clean code & infrastructure), and *Crisis Negotiator* (tactical de-escalation).
- **Chat Vault & Folders (`⌘B`):** Categorize conversations into Folders (e.g. *Finances & Burn Rate*, *Ventures*, *Diary*).
- **Prompt Directives (`⌘L`):** Insert battle-tested execution frameworks into your active chat session.

> 💡 **Pro-Tip:** Press `Esc` anytime to cancel generation if you want to revise your prompt immediately.

CHAPTER 04

📋 Living Dossier & Memory Calibration Lab

Most AI assistants forget who you are every time you start a new conversation. Digital Bestie maintains a sovereign **Living Dossier** in `~/.digital-bestie/user_profile.json`.

What Bestie Tracks:

- **90-Day North Star Target:** What you are actively building right now.
- **Hard Cash Floor & Weekly Burn:** The financial baseline below which you must never compromise.
- **Anti-Goals & Boundary Rules:** Project types and toxic client behaviors you have explicitly agreed never to take on.
- **Avoidance Triggers & Escape Habits:** Procrastination patterns Bestie will actively call you out on.

> **Multi-AI Memory Importer:** Migrating from Claude, ChatGPT, Venice, or Gemini? Open **Settings > Import from Other AIs**, generate the tailor-made export prompt for your previous assistant, and paste the output. Bestie analyzes, stages, and lets you approve memories before committing.

CHAPTER 05

🧩 Specialist Operator Modules

Click **MODULES (⌘2)** in the sidebar to access 16 specialized operational workstations:

MODULE	PURPOSE	EXAMPLE USE CASE
Crisis Triage	High-stakes de-escalation & damage control	Client dispute, unexpected contract breach
Burn Rate & Runway	Capital defense & runway projection	Calculating exact months remaining at current burn
Venture Incubator	Zero-to-one product strategy	Scoping MVP architectures and go-to-market plans
Contract Negotiation	Redline audits & rate defense	Holding firm on hourly floors and non-negotiables
Psychological Unblocking	Dismantling procrastination loops	Breaking 3-day avoidance on a critical proposal

CHAPTER 06

⚡ Prompts Vault & Metaprompt Architect

The **Prompt Vault (** `⌘L` **)** is your repository of high-leverage prompts. Click any prompt to copy, favorite, or immediately inject into Chat.

Metaprompt Architect

Have an unrefined idea for a prompt? Click **Synthesize Metaprompt** ✨ inside Chat or the Prompt Vault. The synthesis engine automatically transforms loose text into an elite prompt structure equipped with:

- `<system_role>` & explicit operational persona
- `<negative_constraints>` (anti-hallucination guardrails)
- Chain-of-thought reasoning steps & XML structured output envelopes

> **Efficacy Scoring:** The built-in evaluator scores your prompts from 0 to 100 and highlights missing instructions, ambiguity, and output schema gaps.

CHAPTER 07

🎖️ Merits, Credentials & Certifications Vault

Keep an encrypted catalog of your degrees, professional licenses, security credentials, patents, and career milestones.

- **Highlight Toggle:** Star high-impact credentials to include them in the LLM system prompt context automatically.
- **Resume & Brief Generation:** Export a markdown brief of all verified merits with one click.
- **Continuous Scroll:** Easily browse dozens of credentials with responsive modal forms and filtering.

CHAPTER 08

Superbrain Hub & TaskFlow Kanban

The **Superbrain Hub** and **TaskFlow** pair visual cognitive maps with an actionable execution pipeline.

TaskFlow Checklist

Kanban board with priorities (Critical, High, Medium, Low), tags, and drag-and-drop state progression.

Time Defense Engine

Automatically calculates cognitive context-switching penalties and inserts anti-fatigue decompression buffers.

CHAPTER 09

🎨 Personal Theme Styling Studio

Your Bestie should match your personal aesthetic without turning customization into a time-wasting rabbit hole. Open **Settings > General & Appearance** to access the 3-control styling studio:

1. Curated Palette Presets

- **Neon Midnight (Default):** Electric cyan (`#00f0ff`) & neon purple (`#b347ff`).
- **Cyberpunk:** High-contrast neon yellow (`#fcee0a`) & hot pink (`#ff2d9b`).
- **Obsidian:** Minimalist steel (`#9aa4b2`) & slate dark (`#6b7280`).
- **Aurora:** Calm mint (`#34d399`) & sky blue (`#60a5fa`).
- **Ember:** Warm orange (`#ff7a45`) & rose (`#ff3d68`).
- **Sakura:** Soft blush (`#f9a8d4`) & lavender (`#c4b5fd`).

2. Custom Accent Color

Use the color picker to pick your signature primary color. Digital Bestie automatically computes an aesthetically harmonious secondary accent via a +60° HSL hue shift.

3. Glow & Aura Intensity

Toggle between **Subtle** (low distraction), **Balanced** (standard luminescence), and **Vivid** (high-energy cyberpunk glow). Click ↺ **Reset to Default** anytime to return to Neon Midnight.

CHAPTER 10

🛡️ Vault Backup, Disaster Recovery & Migration

Because Digital Bestie is 100% local-first, protecting your data against a lost, stolen, or damaged Mac requires an off-device backup strategy.

> **What Happens if You Uninstall Digital Bestie?** Dragging `Digital Bestie.app` to the Trash **DOES NOT** delete your data! macOS only deletes the app binary. All your profile data, Living Dossier, credentials, memories, chats, and configurations live in `~/.digital-bestie/` and remain safe on disk. Reinstalling reconnects immediately.

The Three Defense Layers:

1. **Daily Local Snapshots (7-Day Rolling):** Automatically created once per calendar day on app launch and stored in `~/.digital-bestie/snapshots/`. Protects against accidental deletions.
2. **Encrypted Portable Exports (`.bestie-backup`):** Military-grade AES-256-GCM encrypted backup protected by PBKDF2-SHA256 (310,000 iterations). Machine-bound macOS Keychain tokens are decrypted before packaging and re-encrypted with the new Mac's Keychain upon restore.
3. **Automatic Off-Device Mirroring (iCloud Drive / Dropbox / USB):** Enable in **Settings > Backup & Recovery**. Bestie will silently generate encrypted copies into your chosen sync folder whenever milestones are reached.

Migrating to a Brand-New Mac:

1. Export a `.bestie-backup` file on your old Mac.
2. On your new Mac, open Digital Bestie.
3. On the welcome screen, click **"Restore from backup 📦 "**.
4. Enter your passphrase. Your entire profile, credentials, and chats are instantly restored!

CHAPTER 11

🚀 Updates & Self-Healing Model Health

Digital Bestie features an automated background updater and self-healing intelligence engine:

- **Automatic Update Notifications:** Polls GitHub Releases every 30 minutes. When a new version is published, a glowing topbar badge and banner alert appear. Click to review improvements and download the DMG.
- **Self-Healing Dynamic Fallback:** If your active model is deleted or Ollama runs out of memory, the engine seamlessly fails over (`bestie-abliterated` → `hermes3:70b` → `bestie-light` → `qwen2.5:14b` → any available model) rather than crashing.
- **Diagnostics Hub:** Test Ollama pings, memory consumption, and verify model integrity in **Settings > Ollama & Core Models**.

CHAPTER 12

⌨️ Keyboard Shortcuts Quick-Sheet

Print this page or keep it handy for maximum operational velocity:

SHORTCUT	ACTION	SCOPE
`⌘1`	Switch to Chat Studio	Global
`⌘2`	Open Specialist Modules Hub	Global
`⌘P`	Open Persona Switcher Menu	Chat Studio
`⌘B`	Toggle Chat History Vault & Folders	Chat Studio
`⌘L`	Open Prompts Vault & Directives	Global
`⌘K`	Clear Active Chat Messages	Chat Studio
`⌘Enter`	Send Prompt / Save Calibration Answer	Inputs
`Esc`	Abort Ongoing LLM Stream / Close Modal	Global
`⌘,`	Open Settings Hub	Global
